### Browser Testing

I compared my website in Google Chrome, Safari, and Opera. At first glance these all seemed almost identical. The most obvious difference that popped out to me was the radio buttons—they were the same in Opera as they were in Chrome, but in Safari it was a different type of button. The colors were different in Opera compared to the other two, almost a little unsaturated. It was easiest to see in the header where there is transparent blue over the hero image. The last subtle difference I noticed was that the font in Safari didn't get as bold as in the other two, but other than that it was hard to tell differences even when the screenshots were all side by side.
